PROFESSIONAL EXPERIENCE

STAFF SOFTWARE ENGINEER | *Automation Anywhere Inc.*

July 2021 – Present

Tech Stack: Java, Spring, Kubernetes, ActiveMQ, REST API, Postman, Claude Code

- Designed and shipped an internal AI context-engineering platform providing coding agents persistent architectural context on large git repos, using hub-and-spoke docs, AST-derived knowledge graph, git-hooks auto-maintenance pipeline, and a harness layer requiring agents to consult context before acting. Drove adoption to 350+ engineers.
- Automated production-incident triage across distributed Java platform by building an AI agent, replacing manual log correlation and cross-release diffing; adopted by a team of 19, reducing the initial review time by 60% and average resolution time by 25%
- Authored a first-principles architecture rebuttal against a proposed WebSocket to SSE rewrite of a real-time execution-monitoring system. Quantified backpressure, thread-pinning, and replay-buffer memory cost at production event rate (~2,500 events/sec) and got the RFC rejected in favor of a targeted, lower-risk fix.
- Designed AWS EC2/SSM cloud-provisioning logic for an elastic device-pool feature that auto-scales cloud-hosted device fleets, cutting idle infrastructure cost by ~35%
- Root-caused production CPU spike on a sharded CockroachDB instance spanning ~60K tenants, 6 nodes, tracing via cross-node log correlation to an hourly job silently re-executing redundant O(N) computation. Redesigned to O(1), eliminating recurring cost.
- Led a zero-downtime search migration (SQL to OpenSearch) across ~40M documents with feature-flag-gated cutover.
- Conducted code reviews, shared architectural patterns, and promoted clean, maintainable code.

SOFTWARE ENGINEERING TEAM LEAD | *Opal Organization*

June 2020 – May 2021

Tech Stack: Python, JavaScript, React Native, AWS, REST API, Postman

- Led development of a cross-platform mentorship app using React Native, connecting over 1,000 mentees and mentors.
- Designed and implemented a dynamic Python-based matching algorithm, improving match relevance and engagement.
- Orchestrated end-to-end delivery with executive stakeholders, ensuring high usability and alignment with business goals.
- Directed sprint planning, code reviews, and technical guidance, fostering team alignment and execution velocity.

PRACTICUM STUDENT | *Rubrik Inc.*

January 2020 – June 2021

Tech Stack: JavaScript, HTML, CSS, Python, Python-Flask, MySQL, REST API

- Built an ML-based lead scoring model to identify high-potential sales leads, increasing targeting precision.
- Developed a Flask-based RESTful dashboard to visualize lead metrics, enabling real-time marketing insights.

SOFTWARE ENGINEERING INTERN | *Crest Infosystems Pvt. Ltd.*

December 2018 – April 2019

Tech Stack: TypeScript, XML, PHP, JavaScript, HTML, CSS, MySQL, REST API, JSON, Ionic Framework

- Created a mobile sales insights app in TypeScript using Ionic Framework; supported market analysis and reporting.
- Handled ~100,000+ records via MySQL; implemented performant REST APIs for CRUD workflows.
- Built an admin panel in PHP to meet a stretch goal, collaborating directly with executive stakeholders.

SOFTWARE ENGINEER INTERN | *Bazinga Softtech Pvt. Ltd.*

May 2018 – June 2018

Tech Stack: Java, Android, XML, Firebase, JSON

- Developed a weather forecasting Android app using OpenWeatherMap API; later integrated into the company's core app.
- Applied OOP principles to design reusable, scalable code modules.

EDUCATION

SANTA CLARA UNIVERSITY | MS in Information Systems, GPA: 3.68/4

Sep 2019 – June 2021

UKA TARSADIA UNIVERSITY | B. TECH in Information Technology, GPA: 3.51/4

August 2015 – May 2019

- *Relevant Coursework:* Data Structures and Algorithms, Design & Analysis of Algorithms, Java Technologies, Object Oriented Programming with C++, Advanced Database Management Systems, Web Technologies, Machine Intelligence

SKILLS

- **Languages/Frameworks:** Java, Spring, Hibernate/JPA, JavaScript, ReactJS, Node.js, TypeScript, Python, SQL, REST APIs
- **AI/Agent Tooling:** Context Engineering, Harness Engineering, LangChain, ChromaDB, Vector Search, Claude Code, GitHub Copilot
- **Distributed Systems & Databases:** Sql Server, CockroachDB, PostgreSQL, OpenSearch, gRPC, WebSockets, Temporal, ActiveMQ
- **Cloud & Infrastructure:** Kubernetes, Docker, AWS, GCP, CI/CD Pipelines

PROJECTS

Knowledge Assistant | *Tech Stack:* ReactJS, Python, FastAPI, LangChain, ChromaDB, SQLite, GitHub, JWT Auth

- Architected and developed a RAG-based SaaS platform that enables natural-language querying of structured data.
- Built a scalable full-stack application with a ReactJS frontend and FastAPI backend, integrating LangChain and ChromaDB for vector-based retrieval.
- Implemented JWT-based authentication, secure sign-up/login flows, and role-based access control.
- Enabled streaming chatbot response API for real-time interactivity.
